

# Differece between Normal function and function store in variable

---

```
<!-- normal function -->
```

note - agr may normal function one() ko define hone ke phle bhi excute kru to uska output aayega

```
one ()
```

ouput - gaurarv

```
function one (){  
    console.log("gaurarv")  
}
```

```
<!-- function store in variable -->
```

note - function store in variable, ko define hone ke phle agr excute kiya to error aayega

```
store()
```

output - error(Cannot access 'store' before initialization)

```
let store = function two (){  
    console.log("gaurarv")  
}
```
